PROBIOTA

YOUR WELLNESS, OUR COMMITMENT

We build your brand. **With science no one else can replicate.**

Probiota Innovations is India's only scientist-led gummy nutraceutical manufacturer with access to patented temperature and pH stable probiotic technology, a US-FDA registered Mysuru facility, and over two decades of global pharmaceutical R&D brain behind every formulation.

CONTRACT MANUFACTURING PARTNER

US Patent Holder	EU Patent Holder	Canada Patent
US-FDA Registered	100% Vegan	FSSAI Approved

THE PROBLEM WE SOLVED

Conventional probiotics fail before they reach your gut.

Most probiotic products on the market today are formulated with live cultures that cannot survive heat during manufacturing, packaging, or even transit. By the time the product reaches the consumer, a significant portion of the colony-forming units is already dead, rendering the claimed benefit largely theoretical.

After years of rigorous research, Probiota Innovations cracked a formulation challenge that has stumped the industry. The Founder developed the world's first commercially viable, temperature and pH stable probiotic system, validated across the US, Europe, and Canada through international patents. Our probiotics survive the gummy manufacturing process, which involves elevated heat, and remain viable all the way through gastric acid to the intestine where they actually work.

This is not a marketing claim. It is patented, peer-reviewed, and globally recognized science.

OUR PATENT PORTFOLIO

Three Patents. One breakthrough technology.

US

United States

2018

Platform technology for stability of probiotics in food and dietary supplement applications under high-temperature manufacturing conditions.

EU

Europe — 11 Countries

2020

Granted across Belgium, Switzerland, Germany, Denmark, Spain, France, UK, Italy, Netherlands, Poland, and Sweden.

CA

Canada

2021

Pioneer platform technology improving probiotic stability in food and supplement applications under high-temperature manufacturing.

OUR PRODUCT PORTFOLIO

Formulations that carry science in every gummy.

Every product below is developed in-house by doctorate scientists, using evidence-based ingredient selection, clinical dosage logic, and compatibility testing. These are not generic white-label products. They are engineered formulations.

Moringa Gummies

Lemon & Guava Flavour

- India's First
- Antioxidant Defense
- Skin & Hair Vitality

India's first commercially launched moringa gummy. Each serving delivers 20,000 mg Moringa oleifera extract (from 400 mg of 50:1 Moringa Extract), combined with Vitamin C and Folic Acid, providing natural energy, antioxidant defense, and nutrients for skin and hair. Formulated in a 100% vegan pectin base, free from gelatin.

Seabuckthorn Oil Gummies

Coffee & Tamarind Flavour

- Omega 3 6 7 9
- Complete Plant Oil
- Antioxidant

One of the very few gummy manufacturers globally capable of encapsulating oil-based actives. Each gummy delivers 800 mg sea buckthorn oil, one of nature's only plant sources of Omega 7 alongside Curcumin, Apple Cider Vinegar, Vitamin E, Folic Acid, Omega 3, 6, and 9. Formulated without fish gelatin, suitable for vegan consumers.

Gut Health+ Probiotic Gummies

Orange Flavour

- Patented Probiotic
- Synbiotic System
- Gut Barrier Support

Where our patented technology shines brightest. Contains Lactobacillus acidophilus + Lactobacillus rhamnosus (3.2 billion CFU combined) with FOS prebiotic fibre. The probiotic strains survive the gummy manufacturing process and gastric passage, arriving in the gut intact and active.

IBS Relief Gummies

Lemon & Pineapple Flavour

- IBS Management
- Acid-Stable Strain
- Clinically Dosed

Contains a spore forming probiotic, Bacillus coagulans (32 million CFU), an acid-stable, that survives the entire gastric journey, paired with FOS prebiotic for synbiotic effect. Specifically formulated for IBS symptom management and restoration of microbial balance.

Ashwagandha Gummies

Tamarind & Lemon Flavour

- Adaptogen
- Stress Relief
- Sleep Quality

High-load bitter active formulation. Delivers 500 mg Ashwagandha extract with 120 mg L-Theanine — a pairing that addresses both the physical stress response and the mental clarity dimension. Masking bitter adaptogens in gummies at this dose is a formulation challenge we have solved.

Eye Essentials + Astaxanthin

Coffee & Lemon Flavour

- Blue Light Shield
- 14 Active Ingredients
- Digital Eye Strain

A genuinely complex, 14-ingredient formulation including Lutein (10 mg), Astaxanthin (4 mg), Zeaxanthin, Curcumin, Vitamin A, C, Ginkgo Biloba, Saffron, and Zinc Gluconate, each clinically dosed. Very few manufacturers in India can deliver this density of actives in a single gummy format.

Resveratrol Pro+

Lemon & Tamarind Flavour

- Anti-Ageing
- 3 Billion CFU Probiotic
- Longevity Science

A rare combination of Resveratrol (250 mg) with two live probiotic strains (Lactiplantibacillus plantarum 2 billion CFU + Bifidobacterium longum 1 billion CFU) in a single gummy. Addresses healthy ageing, gut balance, and cellular longevity in one formulation.

Skin Gummy

Guava & Coffee Flavour

- Skin Brightening
- Glutathione 320 mg
- Anti-Ageing Defense

Premium skin formulation with L-Glutathione (320 mg), CoQ10 (50 mg), Resveratrol (50 mg), Astaxanthin, Vitamin C and E, and Zinc Citrate. Addresses skin brightening, cellular antioxidant protection, and collagen support through a multi-pathway approach, not a single-ingredient claim.

WHY PROBIOTA?

The question worth asking before you commit.

Most manufacturers focus on producing formats.
We focus on advancing what those formats can do.
From stabilizing sensitive bioactives to delivering complex, multi-ingredient systems, modern gummy development demands more than standard processes, it requires engineered solutions.
Because in this category, differentiation isn't about what you add.
It's about what actually performs over time.

These are not small distinctions. They determine whether your product delivers on its label claims, whether it can be exported globally, and whether your brand can withstand regulatory scrutiny in international markets.

3

International Patents held by the Founder

25+

Years Global R&D Experience of the Founder

18

Different Gummy Solutions for every concern.

01

Patented probiotic technology

Our temperature and pH stable probiotic system in use is protected by patents in the US, across 11 European countries, and in Canada. If your product carries a probiotic claim, the strain actually needs to be alive when the consumer uses it.

02

Oil-based actives in gummies

Very few facilities globally can successfully encapsulate oil-based actives like sea buckthorn, omega-3, and Vitamin E into a stable gummy format. One of the very few gummy brands in India that only use Pectin. We have mastered this and offer it at scale from a GMP-compliant, US-FDA registered plant in Mysuru.

03

Provide a solution to every concern

We believe in the full spectrum of Ayurvedic actives from ashwagandha and curcumin to moringa. Our formulations are designed for real-world needs, including targeted solutions like pollution-protectant gummies for urban lifestyles to probiotics for after covid impact.

04

Export-ready compliance

Our Mysuru manufacturing unit is US-FDA registered, GMP compliant, and FSSAI approved. Products manufactured here can be positioned for the US, EU, Middle East, and Southeast Asian markets without requiring re-manufacturing or third-party testing gaps.

05

Scientist-led formulation

Every formulation is designed by a PhD scientist with 25 years of pharma and nutraceutical R&D experience. This means ingredient interaction mapping, stability testing, clinical dosage logic, and evidence-based selection are built into every product from day one, not added as a label afterthought.

06

100% vegan, plant-based gelling

All our gummies use agar and pectin-based gelling systems, avoiding gelatin entirely. This opens your brand to a consumer segment that is growing rapidly across India and globally. It also positions your product for export to markets with stricter dietary compliance expectations.

THE SCIENCE BEHIND THE BRAND

Built by a doctorate. Not by marketers.

Dr. Shrilakshmi Desiraju

PhD Medicinal Chemistry · MBA Technology Commercialisation

> *We do not build our own competition. We build your brand. And we do it with uncompromising scientific integrity.*

This principle guides every decision at Probiota. We are a pure B2B manufacturing partner. Your brand, your market, your equity. We provide the science, the facility, the compliance, and the formulation muscle. The brand belongs entirely to you.

- Founder's over 25 years of global pharmaceutical and nutraceutical R&D experience
- 9 years experience working for Big Players in drug discovery and formulation science
- Holds US, European (11 countries), and Canadian patents for probiotic stabilisation technology
- Doctorate in Natural Products and Medicinal Chemistry from a Canadian university
- MBA in Technology Commercialisation, enabling direct translation of lab science to market-ready products
- First-generation technopreneur with a track record in pharmaceutical-to-nutraceutical technology transfer

MANUFACTURING CREDENTIALS

A facility built for global markets.

Our Mysuru manufacturing plant is not a converted warehouse. It is a purpose-built nutraceutical production facility with every major global certification in place, designed from day one to serve brands that want to sell not just in India but internationally.

US-FDA REGISTERED

Facility eligible for export to the United States and other regulated markets.

GMP CERTIFIED

Good Manufacturing Practices compliant across production process.

FSSAI APPROVED

Fully licensed under India's central food safety and standards authority

LET'S BUILD SOMETHING TOGETHER

Your brand deserves science that can defend itself.

If you are evaluating contract manufacturing partners, we welcome a conversation.
